

MIL CCS/TivaWare Install Guide:

Install Code Composer Studio:

STEP 1: Download Code Composer Studio

Go to this Link: http://software-dl.ti.com/ccs/esd/documents/ccs_downloads.html

CCS Incremental Update Policy

When a new release is posted, it may be possible to incrementally update an existing older version of CCS to the newly released version via the CCS Update Manager. Note that this incremental CCS update will only update the IDE components. Also note that not every release will have an incremental update available. More details on the CCS update policy is detailed below:

- Each CCS release, starting with 6.1.2, will have a note regarding availability of an incremental update
- Incremental update availability (if planned) will trail full update releases by no more than 2 weeks
- Not every release will have an option for an incremental update. Reasons for this vary. One reason would be if a CCS release picks up a new version of Eclipse (Eclipse itself does not formally support upgrading between releases)

STEP 4: Accept terms and agreements

 Code Composer Studio v9 Setup

License Agreement

Please read the following license agreement carefully.

TECHNOLOGY SOFTWARE PUBLICLY AVAILABLE

Copyright (c) 2016 Texas Instruments Incorporated

All rights reserved not granted herein.

Limited License Agreement.

This Limited License Agreement ("Agreement") is a legal agreement between you (either an individual or entity) and Texas Instruments Incorporated ("TI"). The "Software" consists of the following materials: (a) the materials identified as TI proprietary software programs in the software manifest for the software subject to the terms herein, and any "on-line" or electronic documentation associated with these programs, or any portion thereof (the "Licensed Materials"), and (b) the materials identified as open source materials or third party proprietary software in the software manifest for the Software, or any portion thereof ("Public Software"). For clarification, your use of the Licensed Materials is subject to the licensing terms contained in this Agreement and your use of the Public Software is subject to the separate licensing terms specified in the applicable software manifest and/or identified or included with the materials to which they apply. This Agreement does not limit your rights under, or grant you rights that supersede, the license terms of any applicable Public Software license agreement. By installing, copying or otherwise using the Licensed Materials you agree to abide by the terms of this Agreement. If you choose not to accept or agree with these terms, do not download or install the Licensed Materials.

TI hereby grants you a world-wide, royalty-free, non-exclusive license under copyrights and patents it now or hereafter owns or controls to make, have made, use, import, offer to sell and sell ("Utilize") the Licensed Materials. With respect to the foregoing patent license, such license is granted solely to the extent that any such patent is necessary to Utilize the Licensed Materials alone. The patent license shall not apply to any combinations which include the Licensed Materials, other than combinations with devices manufactured by or for TI ("TI Devices"). No hardware patent is licensed hereunder.

Redistributions must preserve existing copyright notices and reproduce this Limited License (including the above copyright notice and the disclaimer and (if applicable) source code license limitations below) in the documentation and/or other materials provided with the distribution.

Redistribution and use in binary form, without modification, are permitted provided that the following conditions are met:

☐ I accept the terms of the license agreement.

☒ I do not accept the terms of the license agreement.

STEP 5: Choose the install location. Just leave the default unless you have a different preference

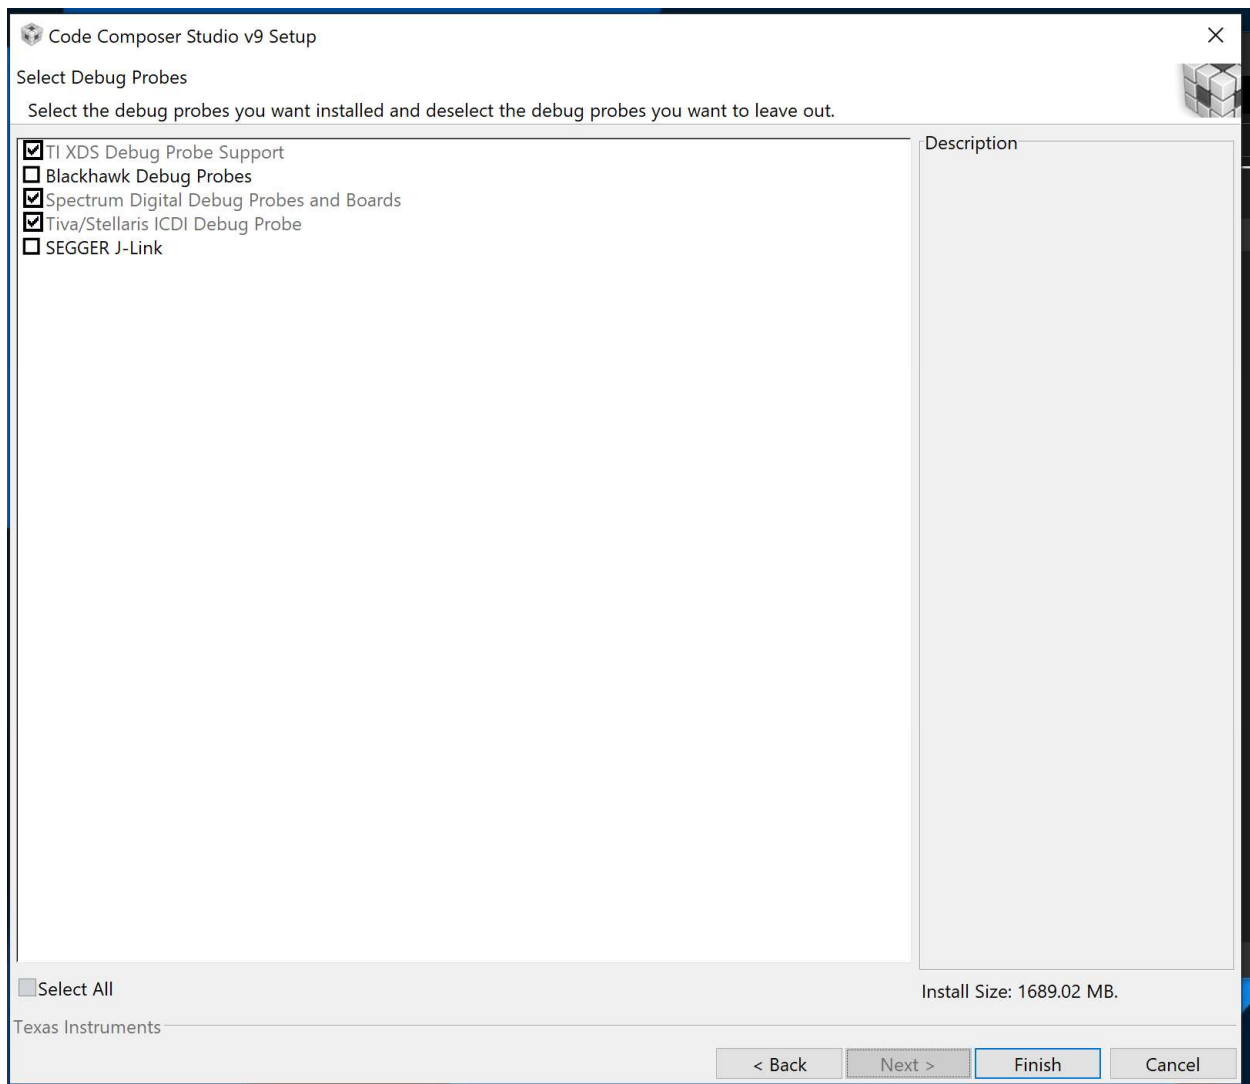

STEP 6: This is the microcontroller selection screen. In MIL we use the TM4C12x series which is highlighted below. You need to install this one for MIL.

NOTE: Even though we only use the TM4C in MIL, I recommend you also install the MSP430, MSP432, and C2000 series microcontrollers if you plan on taking any other advanced embedded software courses at UF like Real Time DSP or MicroP 2. The MSP430 is also an option for Junior design. On top of this, this will also increase your experience with different MCUs and give you a bigger pool for when you take senior design.

STEP 7: Leave this screen as defaults

Install TivaWare:

STEP 1: Navigate to link and download the complete software(this includes all drivers)

<http://www.ti.com/tool/SW-TM4C>

TI Home > Semiconductors > Design resources > TivaWare® for C Series [Complete]

STEP 3: Open up code composer and navigate to the import CCS Projects Tab

Project >> Import CCS Projects

STEP 4: Browse to where you installed TivaWare

STEP 4: Navigate to the examples folder and import and arbitrary project. In this picture, I choose blinky which blinks an LED, but any of the projects in this folder will work.

STEP 5: Now that you have a project that's linked to TivaWare in your workspace, you can simply copy and paste it every time you need to make a new project. This allows you to use the TivaWare driver libraries in your projects.
